TAKE PHYSICAL SECURITY TO THE NEXT LEVEL

With rising global insecurity, a growing extent of regulations and an increasing number of surveillance cameras worldwide, demands on companies that place a premium on their physical security intensify. All this leads to new challenges for organisations, such as:

- How can I respond properly to physical security incidents in order to minimize their impact?
- How can I leverage information in order to create a holistic view of incidents?

To answer these questions, VisionHub VMS+ combines the assets of an enterprise-class VMS with superior workflow support, situational awareness and management capabilities.

VISIONHUB VIDEO MANAGEMENT SYSTEM⁺

With the VMS⁺ approach Qognify takes video-based physical security to the next level. Instead of just recording and displaying video streams, VisionHub VMS⁺ creates a holistic view of a situation, enabling fast and targeted responses in order to minimize the impact of an event.

VMS⁺ THE KEY BENEFITS

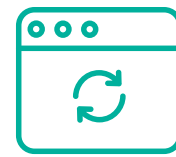

Professional Video Surveillance

Advanced platform to manage and visualize live and archive video.

Situational Awareness

Full picture of incidents as they happen – in real time or with hindsight.

Incident Response Management

Actionable guidance and collaboration throughout the resolution process.

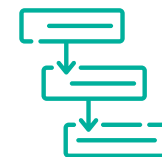

Advanced Resiliency

Flexible options leveraging latest infrastructure technology, reducing risk of lost video while saving hardware cost.

Enterprise-Class Management

Designed to fit the challenges of enterprise-scale organizations that allow for aligning global standards.

Reduced Complexity

One professional video-centric application as basis for all control room operations.

VISIONHUB VMS⁺

As a VMS⁺, VisionHub is leveraging video as the main sensor in the control room. To this end, VisionHub is built around a robust, high-performance video management core, ideal for enterprise-class security tasks, where premium solutions are needed. VisionHub centralizes, integrates and organizes all core physical security systems and sensors in a video-centric interface, providing control room operators with improved situational awareness and powerful incident response management capabilities - all in one system.

THE VIDEO-CENTRIC HUB TO MANAGE SECURITY

V
M
S

- Highly reliable, **robust video management core**, based on vast experience from thousands of projects around the globe
- **Situational awareness** through integrations and visualization
- Improved investigation capabilities, **empowering operators** in the control room
- Rich video experience with **advanced features for video management**, investigation and export
- Enhanced capabilities for **fast and easy deployment**
- **Efficiency** through automation, workflows and collaboration
- **Flexible client options** - desktop, web and mobile
- **Advanced video analytics** and Suspect Search to locate and track specific individuals.

AIRPORTS

As strongly regulated environments, airports require compliant and highly resilient video systems to maintain operations. The prevention of unauthorized access as well as the early detection of suspicious activities are probably the most pressing security challenges for airport operators these days. Partial terminal closures, e.g. if an intruder cannot be found in time, can cause enormous financial damage. Meeting all these challenges must be reconciled with other operational requirements, like moving passengers, luggage and planes as quickly as possible. This is where VisionHub VMS⁺ comes into play: This advanced video management solution not only gives operators full situational awareness, but also helps them handle critical incidents efficiently. VisionHub seamlessly integrates with already existing systems and thus helps airports to easily meet their security requirements within budgets.

BENEFITS FOR AIRPORTS

- **Efficient operations** thanks to active guidance throughout an incident
- **Significant savings** from the reduction of penalties and operational disruptions
- **Better situational overview** through displaying information of integrated third-party **technologies**
- **Compliance** with regulations and standards
- **Enhanced passenger satisfaction** due to safe and seamless travel

UTILITIES & INFRASTRUCTURE

Critical infrastructure and utilities require a particular level of physical security, as their nature makes them an attractive target for all kinds of attacks, from theft to terrorism. Moreover, many utility sites don't consist only of one main area but have substations, that are inherently vulnerable to crime as they are often in open, remote locations. They are especially prone to perimeter violations, vandalism, theft, sabotage and even terrorist threats these days. The sites themselves can pose a considerable health and safety risk for the general public, where unauthorized entry could result in severe injuries or even loss of life. VisionHub VMS⁺ is an enterprise-class video management solution that enables you to maintain the highest level of security at your sites, reliably deterring trespassers while at the same time making sure that you always comply with latest regulations.

BENEFITS FOR UTILITIES & INFRASTRUCTURE

- **Advanced operational efficiency** by a guided incident response
- **Maximized security:** deters trespassers and unauthorized individuals from entering high-security areas, even at unmanned or remote sites
- Optimize your **regulatory compliance** and **decrease liability**
- Use with the Qognify Mobile Client for **off-site monitoring**

RAIL & MASS TRANSIT

In times of growing insecurities, transportation providers all over the world are facing a number of serious challenges to keep up smooth operations and offer a secure service experience for their customers. To top it all off, regulatory authorities are imposing more and more rules to be fulfilled, in order to ensure that passengers, staff and the existing infrastructure are being safeguarded at all times. All these different security factors have to be considered, adding to the challenge of handling already complex operations. To address all the security concerns transportation operators face, Qognify has developed its VisionHub VMS[†]. This software takes a more holistic approach to security than conventional video management systems: It combines situational awareness and incident management technology to maintain operations and to handle emergency situations from the control room – safeguarding passengers and employees, and protecting rolling stock and depots from vandalism and theft.

BENEFITS FOR TRANSPORTATION

- **Reduce the time** to detect and manage incidents
- **Comply** with regulatory requirements
- **Integrate** with your **system environment** to enable an improved situational understanding
- **Save money** on operational costs and fines
- Maintain your **passengers' trust and satisfaction**

HIGHER EDUCATION

Keeping college and university campuses safe and secure benefits students, parents, educators, college administrators and the general public alike. It's a known fact that an effective campus security can help keep crime numbers low. Controlling campuses remotely also limits possible costs of liability in case an incident occurs. VisionHub VMS⁺ is ideal for providing real-time information to campus police and administrators about what's going on in the multiple buildings and remote corners of a widespread college campus. Integrating other third party systems like access control into VisionHub, transforms the captured video into useful information to ensure the highest level of security and prevention. And with VisionHub's incident response capabilities you achieve a high responsiveness in case something actually happens, enabling campus police to be proactive rather than reactive.

BENEFITS FOR HIGHER EDUCATION INSTITUTIONS

- High situational awareness to facilitate **better response**
 - Real-time alerts also from third party systems for **faster intervention** during an incident
 - Prevents vandalism and keeps **maintenance costs low**
 - **Remote and mobile surveillance** on smartphones and tablets with the Qognify Mobile Client
 - **Deter loitering** around campus with advanced video analytics capabilities
- 

QOGNIFY. SAFEGUARDING YOUR WORLD.

Qognify maximizes the outcomes of security and business strategies with its innovative portfolio of video and enterprise incident management software platforms. As a trusted advisor, Qognify serves thousands of customers who place a premium on physical security, safety and operations. Our solutions serve a variety of industries all around the world, work to mitigate risks, increase security and optimize workflows. Headquartered in Pearl River, New York, Qognify operates major development hubs in Germany, Israel and the United States, with sales and support offices around the globe.
