Qognify

Solutions for Logistics

Receive, dispatch, and operate efficiently

Logistics centers handle countless shipments ever day. These shipments are usually processed by fully or partially automated systems that operate under considerable time pressure. Sometimes these conditions lead to damaged or lost shipments, and significant financial impact.

That's where the Qognify BVI (Business Video Intelligence) solution comes in. Qognify BVI helps organizations improve their safety and security while at the same time optimizing their processes and operations. Through the use of intelligent video technology, Qognify BVI can help to prevent loss and damage, and ultimately, save costs. Even better, thanks to a modular approach, Qognify BVI easily adapts to most system requirements, and allows for further expansion at any time.

Protect your building and perimeter

Video technology is more than just a way to monitor your operations.

With Qognify VMS, you have the ability to better prevent unauthorized access into your facility by securing it and its perimeter in accordance to industry regulations, such as TAPA standards. Further customization, like intelligent video analysis and automatic license plate recognition, are also available to ensure a truly customized system, built to fit your individual physical security strategy. Plus, the software is manufacturer-independent to ensure only the best mix of camera types and brands is used to create the optimal overall solution for you.

SAFEGUARDING YOUR WORLD

KEY BENEFITS

Qognify solutions for the logistics industry help you to visualize the route a shipment has taken and thus to easily clarify cases of loss or damage.

TRANSFER OF RISKS

and liabilities is fully documented

EFFICIENCY

and speed of logistics services are increased

QUALITY

of the logistics processes is improved

COSTS ARE REDUCED

and third-party claims can be averted

STANDARDS

and directives can be fulfilled more easily

CUSTOMER SATISFACTION

is increased

SEAMLESS
SHIPMENT TRACKING

Review lost or damaged shipments with ease

The Qognify Logistics Solution makes reviewing cases of lost or damaged items easier than ever. What once took several hours on a standard video system, now takes only minutes. Don't waste time browsing through endless recordings from multiple cameras. With the Qognify Logistics Solution, video is combined with process data from the warehouse management system, so something as simple as a shipment number can be used to call up video footage of a shipment's entire journey through the logistics center.

SAFEGUARDING YOUR WORLD

SEAMLESS
SHIPMENT TRACKING

Better handle customer complaints

By synchronizing video recordings and business processes, the Qognify Logistics Solution goes beyond general cargo logistics to helps customer-facing relations as well. With traditional video technology, investigations into customer complaints can become tedious and ineffective. By combining image data with transactions in the ERP system, the Qognify Logistics Solution allows inquiries to be made by order number. Within seconds after a customer complaint, all event-related video footage can be made available to ensure the situation is handled quickly and professionally.

Track wireless scanners anytime, anywhere

WiFi or radio based scanner systems are commonplace in most logistics centers. However, with so many wireless scanners on the floor, it's easy to lose track of simple processes. By equipping each scanner with an RFID tag, the scanning process can be more easily monitored. When a package is scanned, the RFID locating system can determine the exact location, and then notify the ERP and video management system for more transparent operations. Even better, additional add-ons are available to support various RFID locating system.

Monitor conveyor belt lines more closely

Distribution centers often use automated conveyor belt systems to automatically or semi-automatically sort through packages. During the sorting process, packages are sometimes damaged or misguided. The Qognify Logistics Solution caters to all common conveyor belt systems – and can easily adapt to alternating belt speeds – to quickly localize misguided or damaged packages anywhere on the line. This gives you the ability to reconstruct the route of a package through the sorting and distribution process, all within in seconds.

SAFEGUARDING YOUR WORLD

QOGNIFY.
SAFEGUARDING YOUR WORLD.

Qognify maximizes the outcomes of security and business strategies with its innovative portfolio of video and enterprise incident management software platforms. As a trusted advisor, Qognify serves thousands of customers who place a premium on physical security, safety and operations. Our solutions serve a variety of industries all around the world, work to mitigate risks, increase security and optimize workflows. Headquartered in Pearl River, New York, Qognify operates major development hubs in Germany, Israel and the United States, with sales and support offices around the globe.
